

Help checklists guide an operator through the steps of going to bypass. There are checklists for going to Bypass 1 and 2 and returning to Normal STS operation.

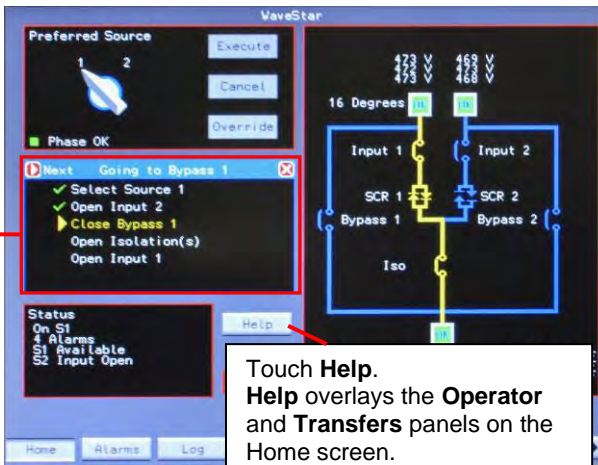

The process of going to bypass will normally generate alarms, for example, change of breaker status.

The **Help** panel indicates completion of the procedure ("In Bypass 1").

The **Status** panel shows "Load on Bypass!!!"

Touch **Help**.
Help overlays the **Operator** and **Transfers** panels on the Home screen.
